...SPECIFICATION it is required, etc. Previously, this problem has been viewed to be that of "real- time " network **monitoring** and performance evaluation. Network monitoring is defined as the extraction, processing, collection, and presentation of...

...a system. Monitoring information is then used by network performance management (usually an individual) to **evaluate** the state of network **resources** in real-time (usually via some type of display). Involvement by high skilled individuals, unfortunately, is required by the present day state-of-the-art.

Data collection requires the accumulation of information relevant to its use. Two approaches for network **data collection** are typically used:

1. Tracing and recording the actual data. The term "trace" refers to ...

Detailed Description

Detailed Description

... Internet Draft" (May 2, 1996). HTML is a simple data format used to create hypertext **documents** that are portable from one platform to another. HTML documents are SGML documents with generic...robust in order to permit asynchronous development and ongoing re-implementation of the components.

Adequate **documentation** to permit compliance by implementors
An auditing mechanism that exercises the specified interfaces to verify information.

Operations architecture 306

A unified **collection** of technology services, tools, standards and controls required to keep a business application production or...vehicle may require special performance tuning tools in the development architecture, as well as real- **time monitoring** tools in the operations architecture.

Also different technology generations may require special services in all ...applications that use this approach for delivering information.

Product considerations

What level of technical support, **documentation** , and **training** is required to ensure the productivity of developers?

The extent of support (on-site, phone, bulletin board, world-wide, etc.), quality of **documentation** , and availability and location of education/**training** should be considered.

71

What functions are required in the control set?

At the minimum...streams which are sent to a user's browser. The SMIL tags then specify the "**schedule**" for displaying those components by determining whether they should be played together or sequentially. This ...stable, proven solution.

131

Is it important to minimize development complexity?

Due to the synchronous **program** control and the request/reply conversation control, RPCs can be fairly straightforward to design and...

...Dynamic Routing

Multicasting and Broadcasting

Load Balancing

Product considerations

132

What are the client's **budgetary** constraints?

Costs may vary greatly among middleware products. There are many factors to consider when...Transaction Server; Sybase Jaguar; TOP END; openUTM; TransIT Open/OLTP

Below are commonly used transaction **monitors** .

BEA TUXEDO - provides a robust middleware engine for developing and deploying business-critical client/server...

Purchase Requisition **Budget** Forecast

Orders, represented by MWSs, may be for resale or for internal use. A field...

...avoided. Managerial personnel are able to determine easily in real time how much of a **budgeted** amount has been spent and how much remains to be spent.

Comparison With Known Workflow...example, vendor demand may represent a contract payment for services. Internal demand may represent a **budget** listing items and **budgeted** dollar amounts. Receipt of demand information in relation to an item results in the creation...

...a "demand preparation" record, or document. A quote may be used for various purposes, including **budget** purposes, convenience in produces other quotes, etc. New quotes may be derived from existing quotes...such functions as General Ledger (GL) and financial reporting. The partners domain may include human **resource** functions, goal and task management, employee **evaluation**, customer/vendor evaluation, etc. Because of the solid-state nature of the database, all of...and train other workers concerning improvements as they are adopted and implemented. Systemic learning--without **training**--results. Knowledge retention is **trackable**,

e.g., by creating a log of program changes, both those made by the users
...ing types of transactions:

Table 2

Universal Demand Documents

Goods for customers

Services

Inventory

Supplies

Budgets

Internal use (capital)

External use (expense)

Vendor contracts

Partner agreement

Others on demand

Similarly, the...a Quote is converted to a MWS to initiate demand fulfillment. In the case of **budgets**, however, since **budgets** are often partner/vendor-specific, a **budget** is created as a "dummy" purchase order. An initial **budget** amount is entered before any expenditure is actually approved. As expenditures are approved, a "committed..."

...from PSRI, to determine when a particular vendor invoice is ready for payment.

Multi-vendor **budgets** allow for **budget** tracking and enforcement with respect to a category of related expenditures where ...of purchase. A non-specific, or universal, partner is created for this purpose. Again, a **budget** is created by creating a dummy PO. When funds are committed, a MWS is created...

...be paper and another item might be coffee. These items may come from the same **budget** but be ordered from different vendors. The creation of POs by item, together with **budget** tracking by MWS, allows this flexibility.

Budgets

In present common business practice, **budgets** and **budget** enforcement are

134

largely hit and miss. The mechanism of a common demand document makes ondemand **budget** control and automatic invoice payment simple and easy to implement. In particular, **budgets** become tied into the more rigid discipline of purchase orders and vendor payments. That is, the present system provides real-time **budget** control and statusing instead of requiring **budget** reconciliation. The implementation of **budgets** provides a concrete example of the extensibility of the present system. In an exemplary embodiment, the implementation of **budgets** uses existing structures and processes for at least the following: Chart of Accounts (COA), Partners...

...manner, existing mechanism for processing Cost of Goods (COG) items are adapted for processing expense (**budget**) items. In accordance with this approach, a Customer file may represent a COG customer or an expense "customer," e.g., "Rent Expense."

In the present system, **budgeting** is done largely by partner or vendor. Because a **budget** is usually vendor-specific, it is much more concrete (much more real) than the typical departmental **budget**, which is often more guesswork than anything else. In particular, a Partner file has two ...

...accounting view that takes advantage of the related switch feature. Within the accounting view, a **budget** page is provided. Within the database structure, a hidden table (a partner-specific "dummy PO") holds **budget** information. The **budget** process may be more clearly understood

with reference to Figure 168. As seen therein, **budgets** may be set based on a variety of infort-nation including **budget** expense history (including overbudget or underbudget amounts by account within a Chart of Accounts, or...

...for employees, sales expenses, etc. Current partner

135

proposals (external proposals) are stored in respective **budget** files. Internal estimates (internal proposals) not specific to any partner are stored in a "TBD...

...holding tank." The foregoing information constitutes a baseline reference for arriving at a COA-specific **budget**. The baseline reference is adjusted experientially to arrive at a **budget** by COA.

Typically, to prepare a **budget**, historical amounts spent on each partner

and each chart of accounts are reviewed and a determination is made whether to **budget** roughly the same amount, increase the amount or decrease the amount. A **budget** line is then assigned for that partner or COA. Once a **budget** has been set, the various people responsible for expenditures undertake a basic **budgeting** exercise in which they create **budget** items by projecting a schedule of payments up to the **budget** cap. **Budget** items can be broken down into greater detail (in much the same fashion as Items Sold/Item Detail) and distributed to different COAs. **Budget** items are categorized by key. **Budget** keys are used to link partners, customers and MWSs. When a key is created, the...

...payments under that key can be viewed.

Before any expenditure can be made, a corresponding **budget** item must be approved by a supervisory user such as a department head, CFO, etc. A user selects one or more **budget** items within a partner file and clicks Submit. The selected **budget** items are then submitted for approval.

Budget item approval can be performed by partner or by COA. An approval window shows COAs with dollar amounts submitted. Selecting a COA shows partners for which **budget** items have been submitted. Selecting a partner displays actual payments submitted for approval. Preferably, an ...

...also provided for storing online relevant documentation such as contracts, proposals, etc. To approve a **budget** item, a supervisory user selects spe

136

cific payments or selects all payments and clicks Approve. The system will not allow **budgets** items to be approved that would cause the cap for a particular partner to be exceeded. Similarly, a warning is displayed when approval of a **budget** item would cause a COA cap to be exceeded. Each **budget** line item is quantified and represented as an item in much the same fashion as if it were a physical item, except that a **budget** line item has associated with it an account. **Budget** line items having the same expected partner are associated together in the form of a partner-specific dummy PO. **Budget** line items having different expected partners may also associated together in the form of a...

...meaning that an invoice cannot be paid without overriding the system. Commitment controls payment. A **budget** item is committed by selecting that line and clicking Cominit. As a result, an item (Item Sold, used here for **budget** purposes) is added to a MWS for the appropriate **budget** key. **Budget** MWSs are kept by key; e.g., a software design MWS would contain all expected payments for the current **budget** year as created by users. As with a COG item, once a **budget** item is present on a MWS, it is available to create a PO. All of the COG infrastructure applicable to items may then be applied and brought to bear on **budget** items.

Search Report from Ginger R. DeMille

A MWS item may be further broken down, by adding under an item items...

...of missing a crucial payment and incurring a penalty, as with tax payments, rent, etc. **Budget** enforcement is automatic. As illustrated in Figure 168, if an item come in over **budget**, it cannot be paid through the non-nal flow of vendor invoice verification. Rather, CFO approval is required to add additional monies to the **budget**, which will most often come from another **budget** account that affects the user. To avoid the need for **budget** realign-ment, an incentive exists for the user and the partner to cooperate to...This ease of customization enables rapid deployment in accordance with a "cookie-cutter" model, thus **keeping** pace with "Internet **time** ." Because the unitary solid-state database is PC-based and follows a model of infrastructure...

Diary of a control freak: The manager's guide to internal control
Pickett, K H Spencer
Managerial Auditing Journal v13n4/5 PP: 210-332 1998
ISSN: 0268-6902 JRNL CODE: MAJ
WORD COUNT: 85787

...TEXT: spout. "Try some, it'll stir your heart and quench your thirst at the same **time**", growled Jack wiping his mouth with his handkerchief.

Bill asked for a straw and drank...performance targets, company trends and so on. If we have to make 20 per cent **budget** cuts in our department we need general information on this issue. Our decision is made...used to strike the annual accounts. Also there should be provision for the operation of **budgets** and management accounts. One set of rules would cover safeguarding assets and interests and properly...

... the performance management scheme and something that is positively looked for at recruitment stage."

"4 **Budgetary** control is an important part of internal controls. The empowerment concept is based on giving...

...best way they think fit. But this will be within the confines of a given **budget**. A **budget** in this context is a plan expressed in financial terms. It provides a delegated level...

... defined allocations of funds to functions. It acts as a control by setting actuals against **budget** (or standard) and seeking explanation of variances. One interesting feature of **budgets** is the use of flexible standards. Here the set **budget** is flexed or adjusted to reflect the actual rather than standard level of activity So...

... less but this is adjusted by the level of activity before we compare actuals to **budgets**."

"A simple illustration will help. Say we are making tables that take wood and glue table sells at L100. Our **budget** and actual results may appear as follows (Figure 39):"

"Our sales have increased and so have our costs. The **budget** shows adverse costs because we have simply done more and this has cost us more...
... level of activity The activity has increased 50 per cent more than planned (i.e. **budget**) and so we increase or flex the **budget** for all direct sales and costs. The fixed costs are left because, in the short...

...level of activity The revised figures appear as follows (Figure 40):"

variances between the flexed **budget** and actual results makes more sense

and we can now target materials for greater scrutiny...

... simple example but it holds many good principles that can be widely applied. If our **budgets** do not reflect our actual activities then they will make little sense. Instead of being...

... hold costs. This may stifle productivity and make comparison of variances meaningless."

"Furthermore - if the **budget** is a tool used by accountants and auditors to keep a check on managers and...

... This is useful if the main objective of an organisation is to police variances from **budgets** assigned to employees. It gets worse when the **budget** becomes a cat and mouse game where managers spend or lose - or hide spending by using vague terminology. If, on the other hand, the **budget** is seen as an important technique used by managers and staff to help them utilise...

...of resources. The internalised control concept is obviously located with this latter interpretation of the **budget** and the **budgetary** control process."

"Financial management is important and each member of staff should ask whether they...

...cannot be admitted until spring... (London Evening Standard, 1996).

"Likewise a detailed analysis of a **budget** can address only part of the key issues facing management. It cannot answer all questions...and a culture where these standards are the norm. Quality in action in terms of **accreditation** is about having the type of procedures that promote quality products and services. The problem is that **accreditation** is about proving we have these procedures and if we are not careful it can...

... approve these procedures and we could refer to the fact that we have achieved this **accreditation**."

Figure 41

"However our goal may be to have a stressfree day out fishing among...
